

Hycean and Hycons Join Forces to Drive India's Net-Zero Journey

APR 19 - Edinburgh, United Kingdom

Hycean, a clean-tech startup pioneering high-efficiency combustion engine technology, has partnered with Hycons, a leader in biogas production from Napier grass. This collaboration aims to integrate Hycean's innovative HYCE-Genset into Hycons' bio-gas value chain to create efficient bio-gas to power solutions, offering a sustainable solution for India's net-zero ambitions. With a focus on technical feasibility and market deployment, the partnership signals a significant step towards accelerating India's transition to cleaner energy sources.

About Hycean:

Hycean is a pioneering clean-tech company, based in UK, driven by a singular vision: delivering power without pollution, accessible to all. With a focus on scalable, sustainable, and affordable decarbonisation solutions, Hycean aims to revolutionize the industry and empower organizations to transition towards cleaner energy sources.
