

Harvester

specific to Napier

Hycons® intervention and research and development effort is holistic.

Vast area of Napier grass fields can not be harvested manually, nor the regular tractor mounted maize harvesters worked to our satisfaction during our own trials.

The requirement was obvious

10-20 TPH

- A all season self propelled harvester.
- Wheel & track mounted options
- Robust enough to cut dense bunch of Napier Stems
- Imported from a country, where the hybrid Napier is cultivated en-mass.
- Cost & size made suitable to fit Indian conditions
