Fine grinder for Napier

Hycons® intervention, research and development effort is holistic.

After trying those ready to buy grinders, we realised that most of them leave significant long strands. It brings mechanical performance risks to CBG Process line.

To our satisfaction and to help the industry with a better solution, we ended up developing a robust & suitable mechanism to fine grind the grass to a consistency comparable to cow dung.

- No long strands for fibre escapes
- Consistency gives better slurry & pumpability
- Great usage case for CBG, Pellet & Ethanol
- Robust and compact with similar or reduced power consumption
- Finer the size reduction better for the fermentation
